

-For example a comet is, a comet's tail is just the solar wind going over this icy body, stripping off particles, ionizing the particles--

-Something I think that's cool about the sun is that even though it looks really big, it is actually a small star.

-actually made out of a old, large refrigerator box. So my two friends and I got inside the box to actually view the eclipse. And I really wish somebody had a camera--

-about the sun is the fact that it has a wind. Actually plasma that comes off the surface of the sun, that's flowing toward the Earth--

-the sun has a differential rotation. Imagine the belly moving and the nose refuses to move. And that's what--

-learned about the sun is that it is one of the primary sources of energy, and so without it there would be no life on Earth.
